

PORT OF WORKINGTON

NOTICE TO MARINERS

NO 3 OF 2026

ANNUAL NOTICE OF MAINTAINED DEPTH OF WATER

Mariners are hereby advised that the Port of Workington maintains a depth of water in the approach channel, turning basin and Prince of Wales Dock of 1.16 metres below chart datum (Dock Gate Cill level).

Mariners should note that tidal flows and weather conditions may result in a fluctuation to the depth of water within the harbour and its approaches due to siltation.

Vessel operators are reminded that at all times they must allow sufficient under keel clearance to safely navigate within the Port of Workington's jurisdiction.

If users are in any doubt as to the safe under keel clearance and available water depths they should consult with the Port of Workington Harbour Master who can provide the latest available survey data.

In this twelve month period, 1st August 2025 to 31st July 2026, five Survey Notices were issued to Port users.

This notice is self-cancelling.

Phil Scattergood

Harbour Master
